DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they are incomplete; Fig. 1 does not have any reference signs, Fig. 4A, 4b have pointing arrows without reference numbers, Fig. 4c does not clearly indicate the thermal spreader 412. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "310" has been used to designate both vents and fan. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: 304, 306, 308 and 408. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: the reference numerical character 310 assigned to the unit and to the vents on Page 4.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. Claims 1-14 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is vague and indefinite because the first and second apertures and the thermal spreader have not being clearly defined in the specification or in the claim.

Claims 2-4 and 7 are vague and indefinite because they include the functional recitations, which are not supported by recitation in the claims of sufficient structure that is being affected by the function or to accomplish the function and therefore lacking further limitation to the claims.

Claims 6 and 11 are vague and indefinite because the thermal spreader has not been clearly defined in the specification and in the drawings.

Claims 5, 8-10 and 12-15 are inherently vague and indefinite since they depend on claims 1, 6 and 11 respectively.

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 2835

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

6. Claims 1-15 are rejected under 35 U.S.C. 102(a) as being anticipated by

Hougham et al.

Hougham et al. disclose a computer system having apertures 64, 65 to be aligned with apertures of a docking station 51 and exposing a thermal spreader 24 to airflow produced by a convective unit 72, the convective unit 72 provides cooling air into the computer system. The method steps of claims 11-15 are necessitated by the device structure as disclosed by Hougham et al.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art listed in the PTO 892 form shows various details of the claimed invention as well as their combinations including notebook computer having a docking station attached to it and provided with air circulation means.
